

YORDINE CHIMBUTANE

Mechanical Engineering
Year 2

About Me

Mechanical Engineering undergraduate at PolyU and RISE Global Finalist with a deep passion for robotics and system design. Represented Mozambique at the FIRST Global Robotics Competition and currently lead the PolyU MATE ROV FLOAT team. Combines early hands-on internship experience in mechanical engineering with a drive to build AI-integrated, sustainable hardware solutions. A former sports captain who thrives in high-pressure, collaborative environments.

Learning

Experience

Robotics

PIC of the PolyU Float team

2025 – 2026

- Spearheaded a multidisciplinary university team in the end-to-end development and deployment of specialized underwater robotics hardware for the international MATE ROV competition.
- Engineered a custom underwater float system featuring a waterproof twist-action power mechanism and integrated depth-maintenance logic, successfully bridging mechanical sealing challenges with ESP32-driven control systems.

Robotics

FIRST GLOBAL COMPETITION

2024 – 2025

- Represented Mozambique as the Mechanical Team Captain and youngest team member. Served as the primary Robot Driver during high-pressure international tournament matches.

High School Research Project

Internal Resistance of 9V cells in the market

2024 – 2025

- Researched about the true internal resistance of 9V cells by varying the external resistance of a circuit and measuring current.

Education

Hong Kong Polytechnic University

2025 - 2029

Bachelor's in Mechanical Engineering

Aga Khan Academy

2019 - 2025

IB MYP and IB DP (Physics, Math,
Economics High Levels) 40/45 points
